EXPERIENCE

Project Human City <i>Full Stack Developer Intern</i>	Oct 2024 - May 2025 <i>Remote (Cross-Timezone)</i>
- Developed, tested, and maintained asynchronous REST APIs using Node.js, following MVC design principles, delivering production-ready backend features across bi-weekly Agile sprints. - Improved application performance by 25% through React code splitting, lazy loading, and state optimization, reducing initial page load time and improving frontend responsiveness. - Collaborated with engineers across multiple time zones to design, implement, test, and deploy modular backend and frontend features, tracking sprint work and issues in JIRA under an Agile workflow.	

PROJECTS

BharatShelf <i>Dynamic Regional Merchandising Engine</i> GitHub	July 2026
- Developed a regional personalization engine that dynamically adapts e-commerce product pages using 6 regional signals including environmental conditions, cultural events, seasonal trends, regional fashion trends, local events, and lifestyle patterns. - Designed a Signal Fusion Engine to combine contextual factors, assign relevance scores, and identify the most suitable regional context for products, enabling explainable and localized merchandising experiences. - Built a scalable full-stack platform using React, Next.js, FastAPI, PostgreSQL, integrating Open-Meteo API and Calendarific API to process regional signals and generate dynamic product merchandising experiences.	
RoomSync <i>Roommate Allocation System</i> GitHub	May 2026
- Developed a hybrid room allocation engine combining weighted similarity scoring, greedy optimization, and local search heuristics to automate accommodation assignments across 50,000+ preference records, achieving over 95% compatibility during evaluation. - Designed fault-tolerant REST APIs using FastAPI and Node.js with request validation, logging, exception handling, and concurrent request processing, ensuring reliable system performance under concurrent workloads. - Architected a modular multi-tier accommodation management platform using Next.js, TypeScript, FastAPI, MongoDB, and REST APIs, supporting scalable end-to-end allocation workflows.	

ACHIEVEMENTS

Leetcode & HackerRank	Solved 300+ DSA problems on LeetCode Achieved 4★ on HackerRank	Present
Flipkart GRID 8.0	Achieved Semi-Finalist position in Flipkart's national-level engineering challenge among participating teams	2026
Myntra WeForShe Hackerramp	Selected among Top 6 teams in Myntra's national-level hackathon focused on building innovative solutions for fashion technology	2026
BITS TechXcelerate Hackathon	Achieved Semi-Finalist position at BITS Hyderabad , selected among Top 100 teams from thousands of national-level applicants	2025
Nutanix Certified Associate (NCA)	Earned industry certification in cloud infrastructure and enterprise virtualisation	2026
TechVortex International Competition	Secured 1st Runner-Up among 500+ teams	2024
IEEE ICCUBEA Conference	Research Paper published on IEEE Xplore	2024
GirlScript Summer of Code	Ranked among Top 50 Contributors out of 27000+ Participants	2024

SKILLS

Programming: C++, Java, Python, SQL, TypeScript, JavaScript
Core CS & Backend: Data Structures & Algorithms, Object-Oriented Programming, Complexity Analysis, Operating Systems, Computer Networks, Database Management Systems, REST APIs, MVC Architecture, Distributed Systems
Frameworks: Node.js, Express.js, FastAPI, React, Next.js
Databases: MySQL, PostgreSQL, MongoDB, Database Design, Data Modeling
Cloud & Tools: AWS EC2, Docker, Linux, Git, GitHub, Postman, JIRA, CI/CD
Software Practices: Agile Development, JIRA, API Testing

EDUCATION

Bachelor of Technology, Symbiosis Institute of Technology, Pune <i>Computer Science and Engineering</i>	2023 - 2027 <i>CGPA: 8.91/10.0</i>
Delhi Public School, Lucknow <i>Higher Secondary Certificate (CBSE)</i>	2021 - 2023 <i>94.4%</i>
